Run Trackem Automatically and Silently!

Trackem has uncovered an effective feature to help ensure Trackem runs even if the user ends the application. If the application for some reason is shut down, this feature will automatically re-launch the application at the date and time requested.

Please follow the steps below from any Trackem equipped handset.(excluding blackberry)

- Select **Datebook** in the main menu
- Choose **New** to create an event
- Type in a **Subject** title
- Leave **Location** blank
- Choose a **Start** time
- Choose **Duration** time as required (all day feature is available)
If you would like to auto switch Trackem on each hour, you should choose 1 hr and then repeat all the steps again for the next few hours.
- Choose **Date** the event should start on
- Choose '**daily**' from the **Repeat** screen
- Choose an **End** date if required – can go ahead 12 months.
- Choose **Reminder** as '**off**'
- Leave **Profile** as '**No Change**'
- Change **App** to **TRACKEM**
- Click **Done**

If you would like the app to run through the day, we suggest running various events to cover each hour eg. Event 1 to run from 8am to 9am, Event 2 to run from 9am to 10am etc.

You have now successfully set up a handset to auto-run Trackem at specific times throughout the day without any notifications to the end user.

Making the sometimes difficult & most ignored SIMPLE!

Trackem, Simple and Affordable
